

SUNWARD

STEEL BUILDINGS

High Quality Steel Buildings

Raising Industry Standards For Over 45 Years!

SUNWARD STEEL BUILDINGS

Sunward Steel Buildings was established in 1972 and has been manufacturing and supplying superior steel buildings of all types ever since. We have delivered over 50,000 buildings worldwide and treat every customer with honesty and integrity. We own and operate 3 large full service manufacturing facilities.

Our 2 Wedgcor factories are located in Jamestown, ND while our factory, Rockford is located in Walterboro, SC. Sunward's operations headquarters is run and operated in Denver, CO.

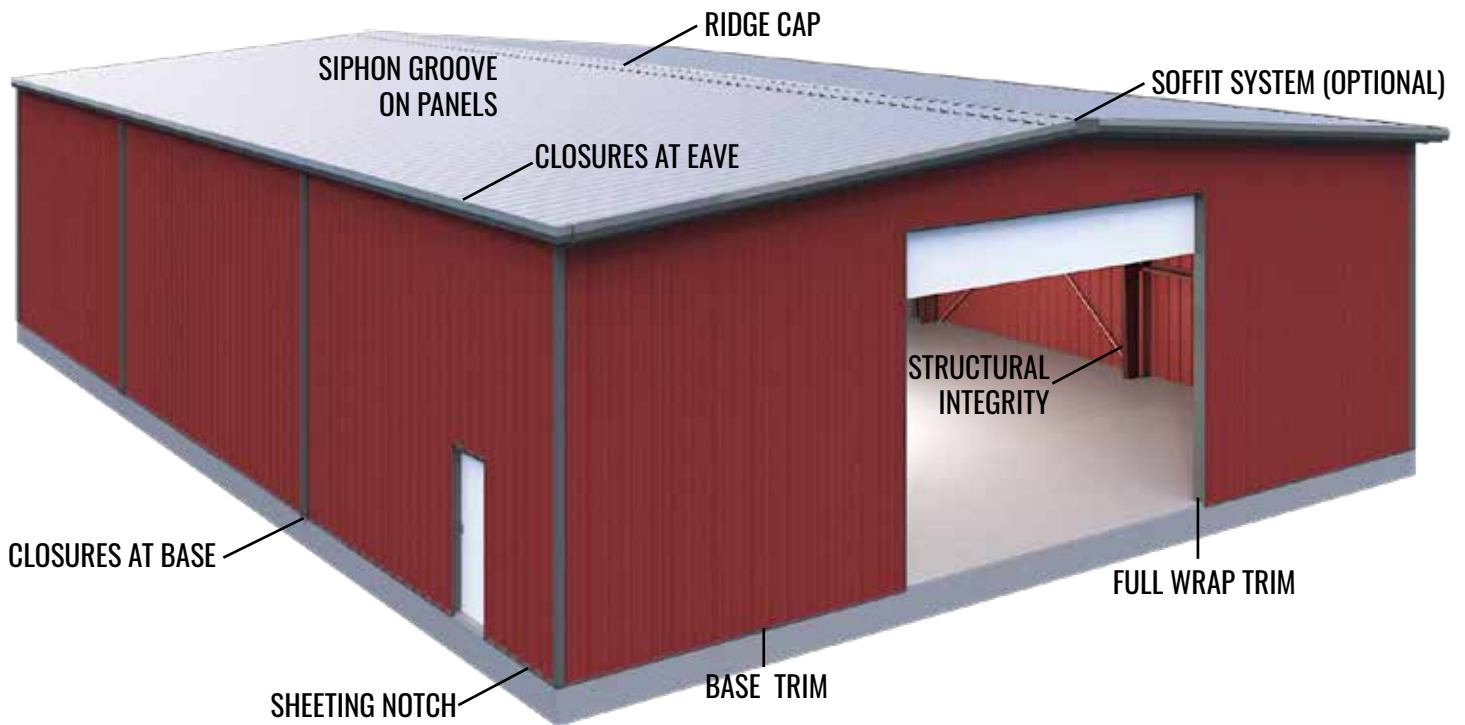

We hold several accreditation's including IAS, which provides evidence that an organization operates at the highest level of ethical, legal, and technical standards. Our buildings meet the highest level of building manufacturing standards.

EXCLUSIVE SEAL TIGHT FEATURES

Sunward's Exclusive Seal Tight Features bring unmatched quality to our buildings. When installed properly, our exclusive special building features help create a complete building system.

Ten Star Features & Benefits

Our Quality Standards Compared To Competitors

SIPHON GROOVE

Allows the moisture to gather and siphon under the seam, helping to prevent the insulation from getting wet.

HIGH RIB SHEETING

26 gauge with purlin bearing leg for ease on construction and High-Rib support.

DIE-FORMED RIDGE CAP

Matching roof profile with Siphon Groove and purlin bearing leg that extends 18" on both sides.

6" SOFFIT TRIM SYSTEM (OPTIONAL)

Steel flashing and a formed closure that help prevents moisture from getting into insulation.

PREMIUM FASTENERS

Rust and corrosion warranted with a special cupped head that prevents over drilling and protects the washer from harmful UV rays.

BASE TRIM

Included on ALL buildings, base trim covers the concrete sheeting notch providing a clean trimmed finish at the base of the building.

BASE ANGLE

G-90 galvanized 16 gauge angle protects the base of the sheeting and wall insulation.

MAIN FRAME COLUMNS & RAFTERS

55 KSI yield strength provides certified structural integrity strength.

HIGH STRENGTH BRACING

With overlapping purlin and girts, flange bracing, and heavy galvanized purlin bracing angle.

UPGRADED CLOSURE SYSTEM

Upgraded quality closed cell closures with pre-applied adhesive for a secure fit to keep water, dust, and pests out.

FOUNDATIONS

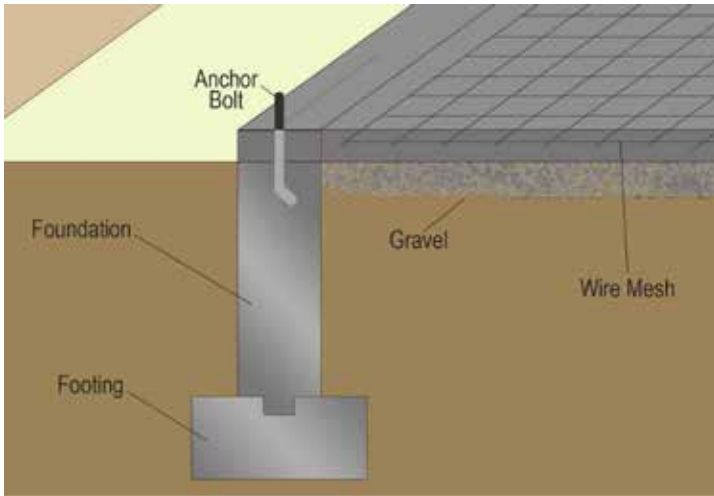

Pier Foundations

Pier foundations are used when a concrete slab floor is not needed. They are ideal for barns, equipment storage, horse buildings, and in other buildings when cost is a factor.

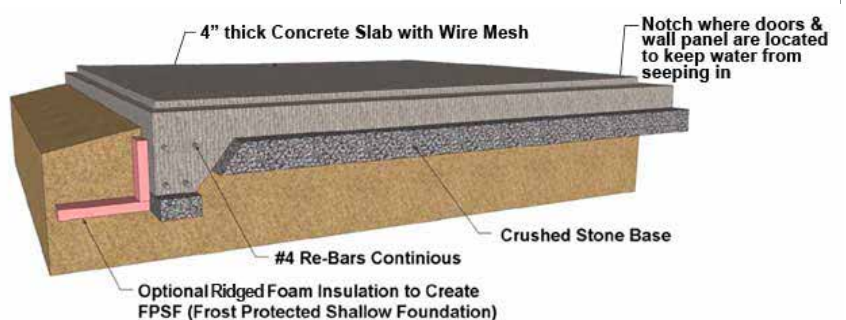

Perimeter Foundations

Perimeter foundations are used in buildings that are heated in areas where the ground freezes. This helps prevent the frost from freezing the ground under the slab.

Monolithic Foundations

Monolithic foundations are typically used in non-heated structures. They are commonly used in self storage buildings, shops and other buildings with light gauge framing. They can also be used in conjunction with piers for additional column support.

FRAMING OPTIONS

1:12 ROOF PITCH

2:12 ROOF PITCH

3:12 ROOF PITCH

4:12 ROOF PITCH

SINGLE SLOPE

LEAN-TO

Framed Openings

We provide structural framed openings for doors and windows. Our framed openings provide support for doors and windows and secure them to the building. This eliminates the need for wood framing and prevents the doors and windows from shaking when they open and close.

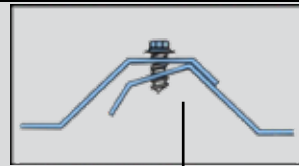

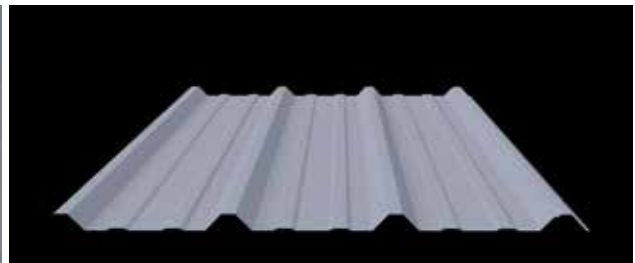

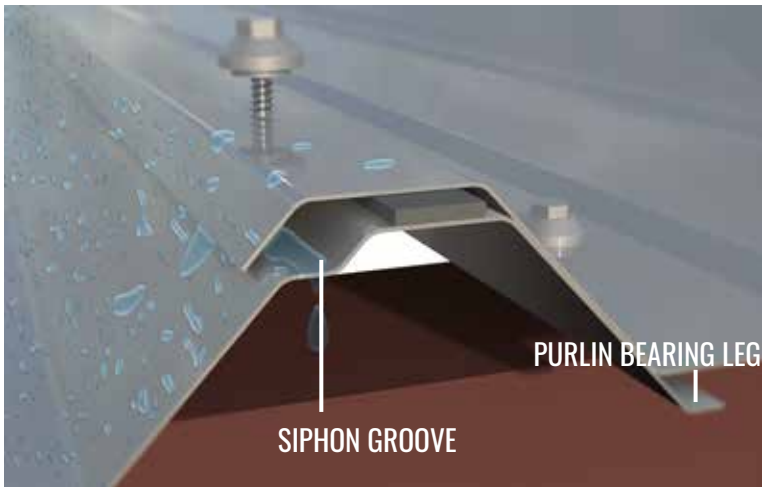

WALL SHEETING

PBR Panel with Siphon Groove

At Sunward our High Rib PBR Panel is standard with an exclusive Siphon Groove. The Siphon Groove allows the moisture to gather and siphon under the seam, helping to prevent the insulation from getting wet. This is only available with Sunward manufactured products. Outsourced panels will not include a siphon groove.

The panels come standard in 26 gauge. 24 gauge is available in white and galvalume.

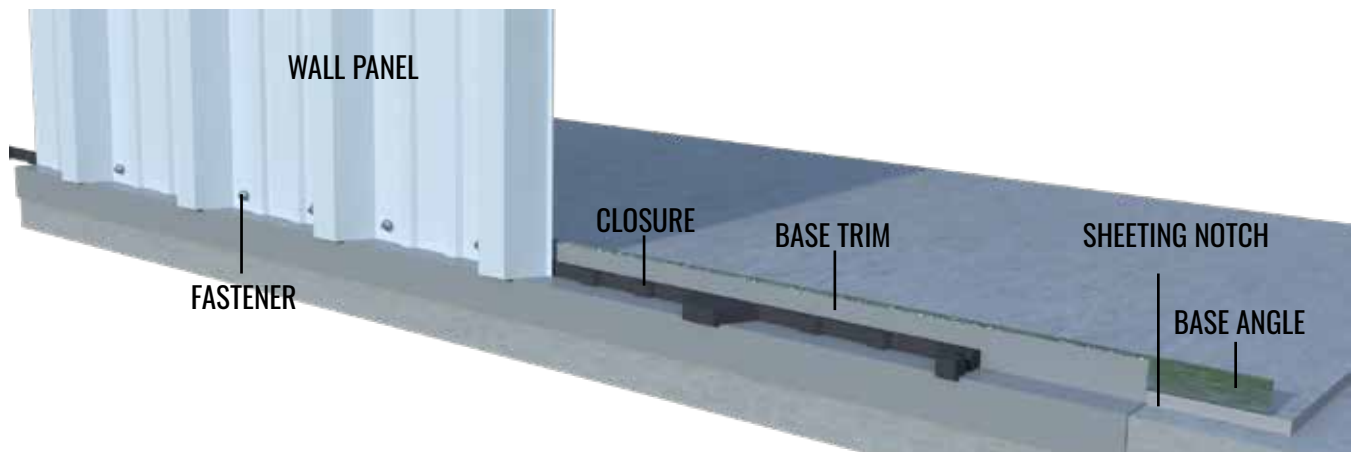

Panels without purlin bearing leg causes a gap between which compromises the seal and creates leakage

Architectural Panel

Architectural Panels offer an aesthetically pleasing look by reversing the panels to conceal the hardware. They are ideal and often used in buildings when the building owner is adhering to local city zoning requirements or looking for a different look.

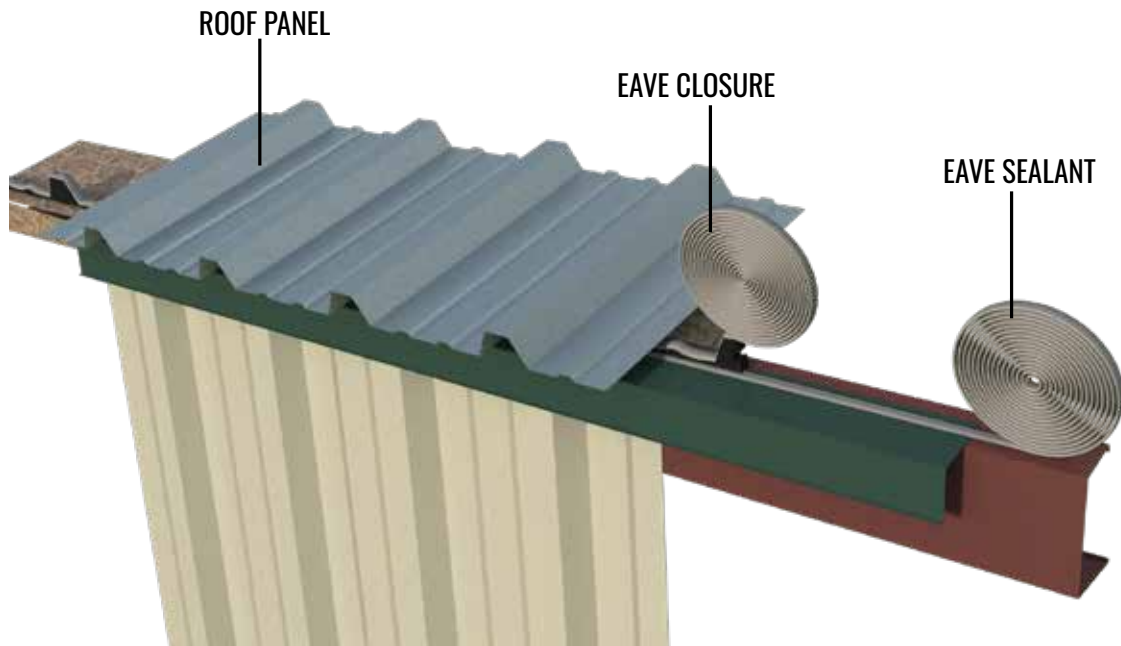

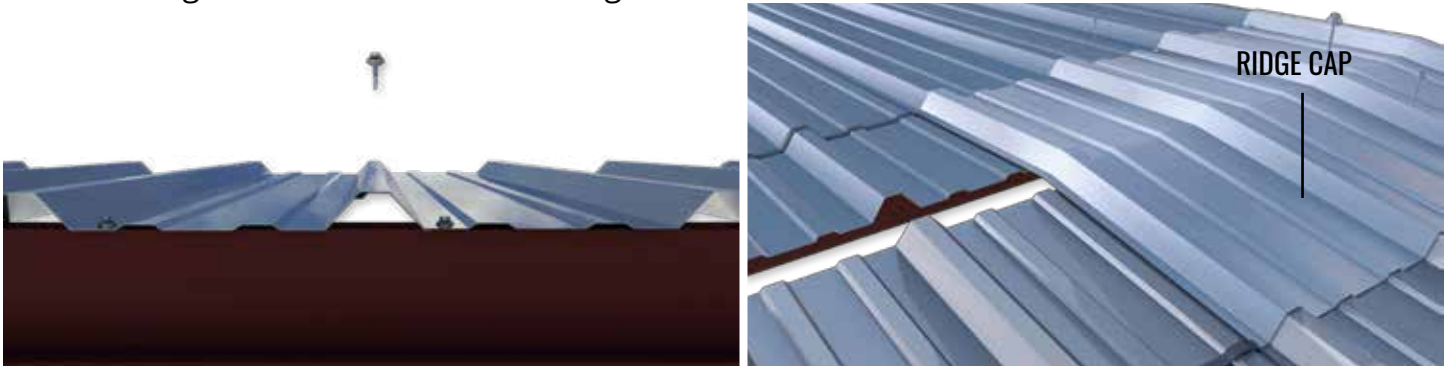

The panels come standard in 26 gauge. 24 gauge is available in white and galvalume.

ROOF SHEETING

PBR Panel with Siphon Groove

High Rib PBR Panels are standard in metal building roofs. Our exclusive PBR Panels with Siphon Groove is a great choice for roof sheeting.

Standing Seam Roof Panel

Standing seam roof panels are often used in buildings over 80' wide providing uplift protection in windy areas. At Sunward we use a variety of standing seam roof panel options based on building use and architectural specifications and requests. Pictured is a common standing seam roof panel. Separate tools or machinery are required to install standing seam roofs.

Standing Seam Panels come standard in 24 gauge.

COLORS

Color Options

We offer up to a 40-year paint warranty on most colors!

We have a wide variety of options that truly make your building beautiful and one-of-a-kind. Our color options run across not only the exterior of your building but are also incorporated into our trim packages and even down to the actual exterior screws.

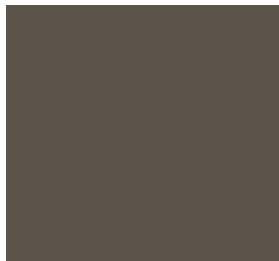

ASH GRAY

BURNISHED SLATE

LIGHT STONE

SADDLE TAN

HUNTER GREEN

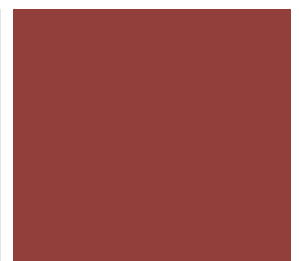

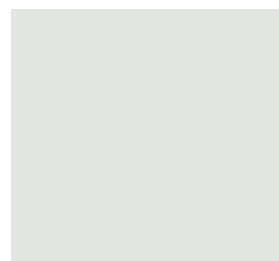

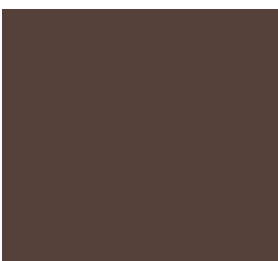

KOKO BROWN

CHARCOAL GRAY

HAWIIAN BLUE

POLAR WHITE

RUSTIC RED

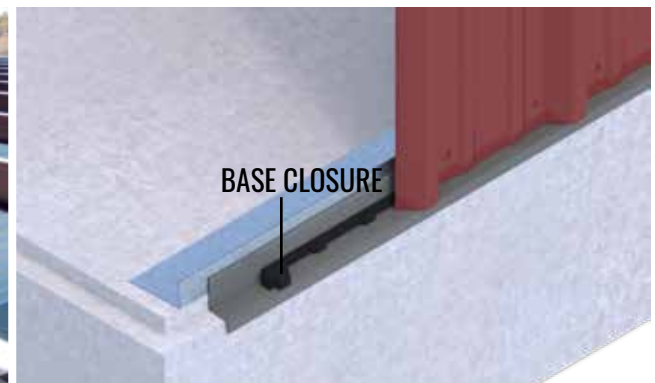

WAINSCOT OPTIONS

Wainscot can be added to the exterior of any building to add color or contrast. Transition trim can be added to soften the transition between the two colors and dress up the look. There is a girt placed at the height of the wainscot. Wainscot is typically run at 4', but can be customized to any height. Custom brick or stone finishes can be added to the wainscot for curb appeal.

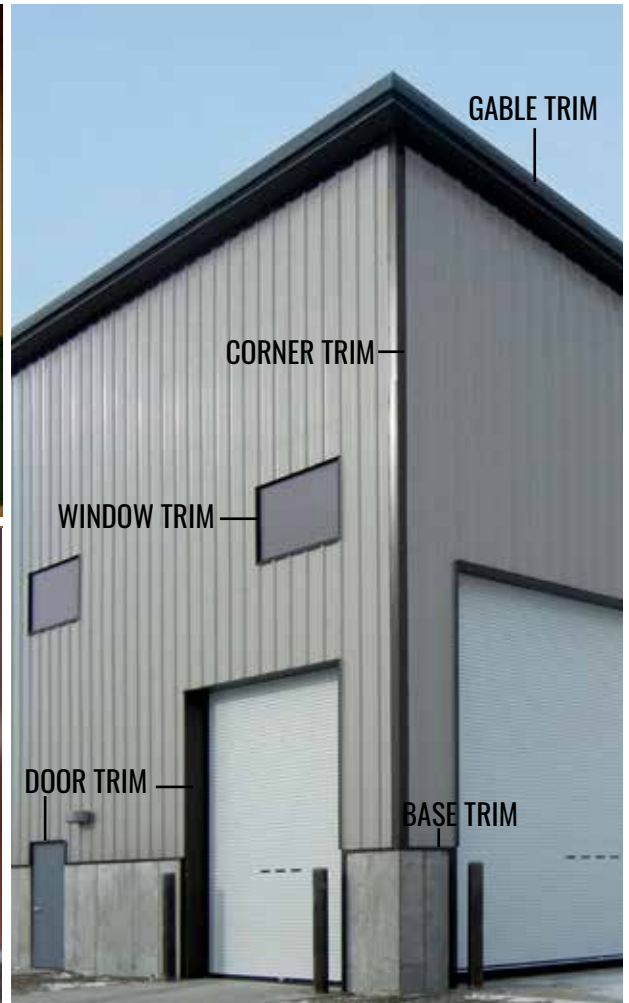

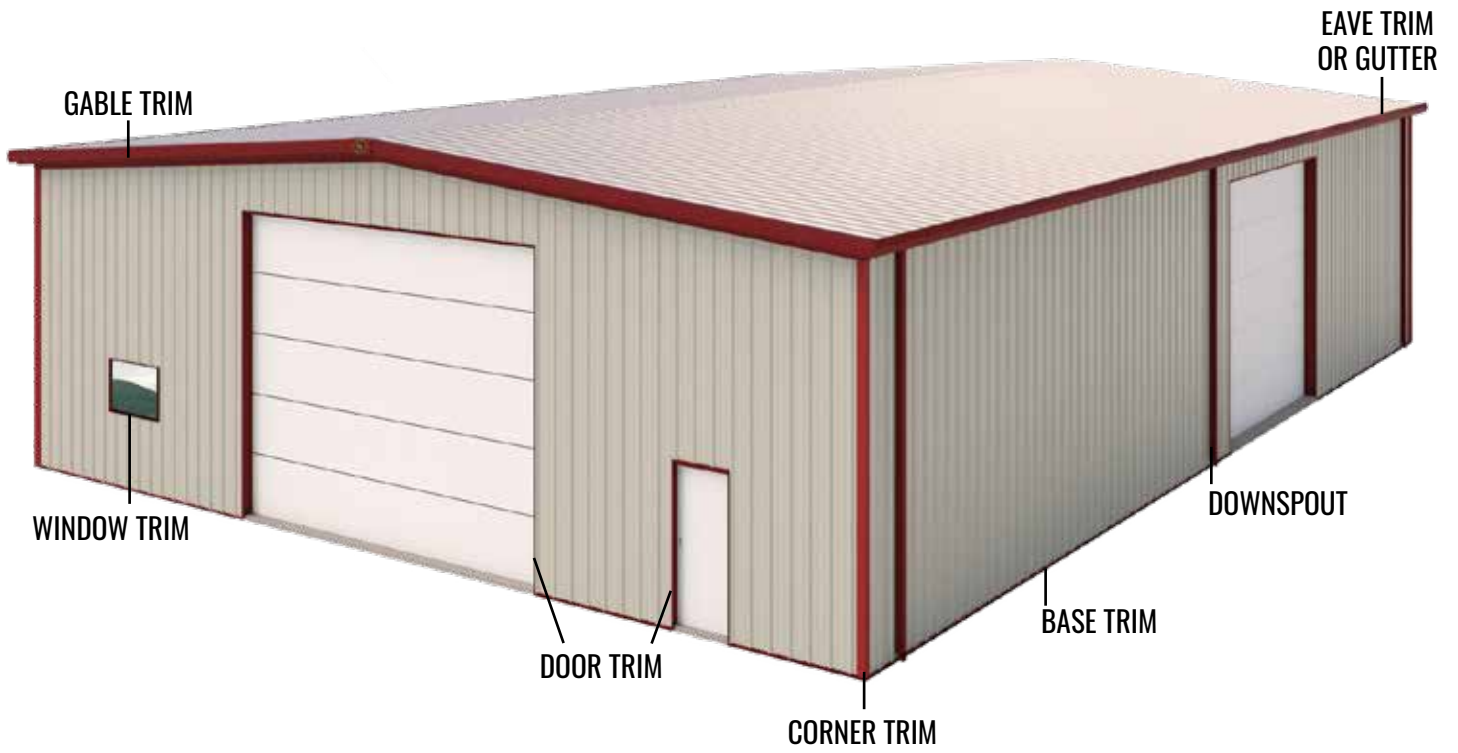

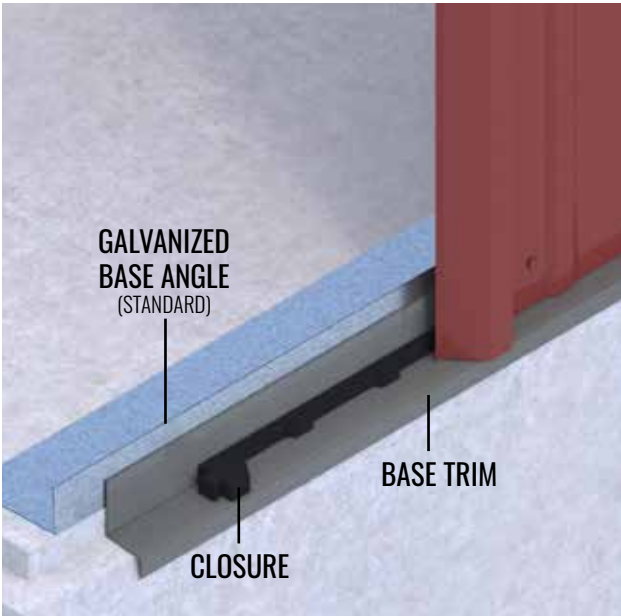

CLOSURES

Our closed cell closures are upgraded quality, Adhesive is pre-applied to ensure proper positioning of the closure and give a better fit. The strips interlock at the eave and base underneath the metal panels preventing water, dust, air and pests out. The closure is an important component to our exclusive Seal Tight Building Features.

TRIMS

Base trim comes standard on all Sunward Steel buildings. Galvanized base angle helps prevent rust on the concrete. Galvanized base channel gives liner panel an interior attachment.

FASTENERS

Our high quality, high strength, "Long Life" fasteners are red rust corrosion warranted and color matched to your building.. They have a special cupped head that prevents over drilling and protects the washer from harmful UV rays. This fastener is a critical component in our Seal Tight Building System.

DOORS

Steel Walk Doors

Our steel walk doors come standard as heavy 18 gauge , insulated and foam filled with a Polyurethane core. Included with our doors are a lever lock and a sub-frame with full trim and closure strips.

Overhead Doors

Overhead doors are available in various heights and widths to accommodate any size framed opening, and can be ordered with insulated or non-insulated options. Glass lites, track options, and weather stripping are available to customize your door.

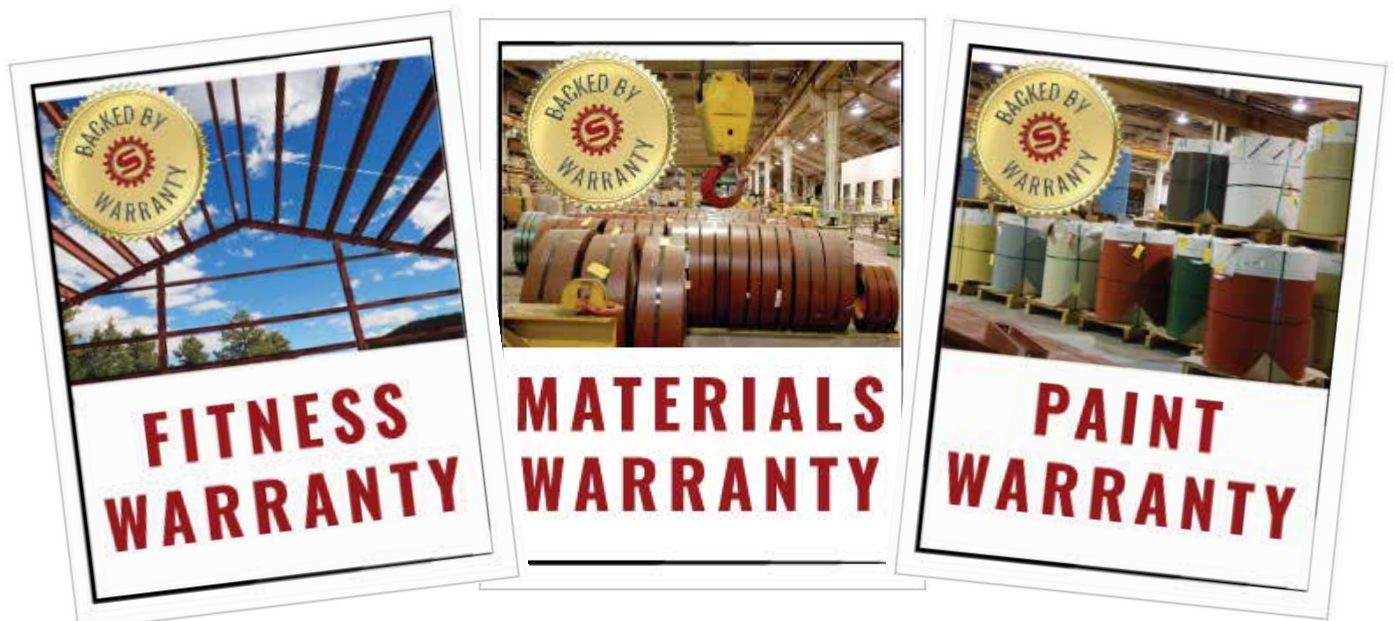

CUSTOMIZATION OPTIONS

Accessories can add a finishing touch to any prefabricated steel building. We supply the most common steel building accessories from doors, to vents, to metal building insulation, and everything in between. Sunward Steel works with name brand suppliers that have the experience and service capabilities to meet our customers' needs.

BUILDING WARRANTIES

Your Sunward building products are backed by warranty. We offer some of the most complete, limited warranties in the industry!
